

THE TOOLSMITH

Custom CMMS Build Guide

Your step-by-step guide to working with The Toolsmith

AI-Assisted Builds for Small Maintenance Teams

thetoolsmithapp.com

WELCOME

Thank you for reaching out.

We build custom CMMS applications for small maintenance teams who deserve better than overpriced enterprise software. Every build is AI-assisted — which means faster delivery and lower cost, without cutting corners on quality.

This guide walks you through exactly what happens from the moment you submit your inquiry to the day your system goes live. We believe in being completely transparent about our process so you know what to expect at every step.

WHAT'S INSIDE

- The five-step build process from inquiry to launch
- Pricing tiers and what's included in each
- Why The Toolsmith is built differently — on purpose
- An alternative self-serve option for teams not ready for a custom build
- Next steps after this guide

THE BUILD PROCESS

Five steps from inquiry to launch.

01 Discovery Call

Within one business day of receiving your inquiry, we reach out to schedule a short discovery call — usually 20 to 30 minutes. This is where we learn about your team, your current workflow, and exactly what you need your CMMS to do. No sales pressure. Just a straightforward conversation.

02 Proposal & Scope

Within two business days of your discovery call, you receive a written proposal covering the exact features we'll build, the timeline, the total cost, and the monthly hosting and support fee. Nothing is vague. You know exactly what you're getting before you commit to anything.

03 Build Phase

Once you approve the proposal and submit a 50% deposit, we begin the build. Depending on your tier, this takes one to four weeks. We use a proven tech stack — React, Supabase, and Vercel — that is fast, reliable, and scales with your team.

04 Review & Revisions

Before going live, you get a full walkthrough of the system and a two-week review period. Any changes or adjustments within the original scope are handled at no extra cost. We don't consider a build complete until you're satisfied with how it works.

05 Launch & Handoff

On launch day we connect your custom domain, run final checks, and hand over full access. You receive complete source code ownership — no lock-in. The remaining 50% is due at launch. After that, your monthly fee covers hosting, updates, and direct support.

PRICING TIERS

Choose the build that fits your team.

All custom builds include a monthly hosting and support fee of \$49 to \$99 — covering your database, SSL, backups, uptime monitoring, and direct access to us for questions. You always own your source code.

STARTER

Starter

\$500 – \$800*One-time setup · 1 to 2 weeks*

A clean, simple work order system with your branding. Work order creation and tracking, technician accounts, manager dashboard, priority queues, mobile-friendly, hosted and maintained. Best for teams who need to replace spreadsheets fast.

STANDARD

Standard

\$1,200 – \$2,000*One-time setup · 2 to 4 weeks · Most popular*

Everything in Starter plus full asset registry, preventive maintenance scheduling, parts and inventory tracking, compliance and downtime reporting, and custom fields tailored to your operation. For teams who need more than basic work orders.

PREMIUM

Premium

\$2,500+*Scoped per project · Timeline determined in discovery*

A completely custom build from the ground up. Includes a requirements discovery session, custom database design, integrations with existing systems, advanced reporting, and multi-site support. For operations with unique requirements.

WHY THE TOOLSMITH

Built differently. On purpose.

❖ AI-Assisted, Human-Led

AI accelerates the build and keeps costs low. Every decision is reviewed and quality-controlled by a human who understands maintenance operations. We're transparent about this because we believe it's a benefit, not a limitation.

❖ You Own Everything

Source code, database, domain — all yours from day one. No vendor lock-in. No surprise price hikes. No dependency on our continued existence. If you ever want to move your system elsewhere, you can.

❖ Priced for Small Teams

Enterprise CMMS tools charge \$45 to \$120 per user per month. A team of ten pays up to \$14,400 per year before any customization. The Toolsmith delivers a comparable system for a fraction of the cost.

❖ No Bloat

Every feature in your build earns its place. We don't add features to pad the scope or the invoice. You get exactly what your team needs — nothing more, nothing less.

ALTERNATIVE OPTION

Not ready for a custom build?

If a custom build is more than your team needs right now, you can start with our ready-made Toolsmith CMMS app. No setup required — create an account and your team can be running work orders the same day. You can upgrade to a custom build at any time.

LITE PLAN

\$19/month*For the whole team — no per-seat pricing*

Work orders, technician queues, manager dashboard, priority filtering, and mobile access. Everything a small team needs to stop tracking work in spreadsheets.

PRO PLAN

\$49/month*For the whole team — no per-seat pricing*

Everything in Lite plus full asset management, preventive maintenance scheduling, downtime and compliance reporting, and parts and inventory tracking.

14-Day Free Trial

Try the full Pro experience for two weeks. No credit card required to start. If it's not the right fit, you can walk away — or upgrade to a custom build with full data migration.

Start your trial at: toolsmith-cmms.vercel.app/register

WHAT HAPPENS NEXT

We'll be in touch within one business day.

Your inquiry has been received. Within one business day, we'll reach out to schedule your discovery call — a short 20 to 30 minute conversation where we'll learn about your team and exactly what you need.

In the meantime, if you have any questions you can reply directly to the email that delivered this document. We respond personally to every message.
